Selkon

Selkon Heating & Refrigeration Systems & Solutions

Established in 2001 on the installation of stainless railing systems, Selkon has undertaken major projects in Stair Systems.

Our company, which prioritizes quality, trust and aesthetics, strives to contribute to the needs in the sector with new models and reproductions by better monitoring railing systems.

With its disciplinary R&D studies, corner turns, which are one of the most important problems in the manufacturing and assembly stages, were solved with the "hollow elbow" model and made a great contribution to the sector. Our company, which was incorporated in 2007, has added a different light to the railing industry by transferring its aesthetic concerns and knowledge with the Selkon product, a new product in railing systems, and new models. With the year 2010 it became the first acrylic rod manufacturer in its sector with the production it established.
